TRACK AND INTENSITY OUTLOOK

- **It must be emphasized that heavy rainfall and severe winds may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to "Other Hazards affecting Land Areas" for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- INDAY is forecast to generally move northwestward while remaining over the Philippine Sea and may pass closest to Extreme Northern Luzon between tonight and tomorrow (11 July) morning. Afterwards, INDAY will move toward the southern islands of Japan and may make landfall or pass close over the northern coast of Taiwan. It will then exits the Philippine Area of Responsibility (PAR) by tomorrow morning or afternoon and make landfall over the eastern coast of mainland China by tomorrow evening or Sunday (12 July) early morning.
- INDAY is forecast to remain as a typhoon until it exits PAR. It will then weaken into a severe tropical storm after moving further inland over mainland China.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 PM today.
